Use this index to look up a description of each field used to track work items. This reference includes all fields defined within the core system processes/process templates: [Basic](#), [Agile](#), [Scrum](#), and [CMMI](#). The fields and work item types (WITs) available to you depend on the process you chose when you [created your project](#).

To support additional tracking needs, you can [define your own custom work item fields](#).

### ⚠ Observação

The [Analytics Service](#) doesn't support reporting on plain text and HTML fields at this time.

## Alphabetical index

Values in parenthesis indicate the following:

- **System:** Core system field assigned to all work item types for all processes
- **Agile:** Used only by the [Agile process](#)
- **CMMI:** Used only by the [CMMI process](#)
- **Scrum:** Used only by the [Scrum process](#)
- **TCM:** Used to support Test case management

By using the system fields or other fields you have added to your project collection, you can enable meaningful cross-project reports and queries. In addition, any non-system field that is referenced in the workflow or forms section of the work item type definition must have a **FIELD** element that defines it in the **FIELDS** section of the work item type definition XML file. Also, you must specify any non-system field that you might want to use to generate a query or report in the **FIELDS** section.

## Field reference topics

The following articles describe fields that are used in common by several WITs, or those that are functionally

specific to just one or a few WITs.
