Several features depend on the project, repository, or team that you have selected. For example, dashboards, backlogs, and board views will change depending on the project and team you select.

Also, when you add a work item, the system references the default area and iteration paths defined for the team context. Work items you add from the team dashboard (new work item widget) and queries page are assigned the team default iteration. Work items you add from a team backlog or board, are assigned the team default backlog iteration. To learn more, see [About teams and Agile tools](#).

View and open a project

From the **Projects** page you can quickly navigate to a project that you have permissions to view.

1. Choose the  Azure DevOps logo to open **Projects**.

The projects you most recently viewed are displayed, followed by a list of all projects in alphabetic order.

2. Hover over the dots and you can open the service of interest for that project.

4. Choose **Create Project** to add a project. You must be an account administrator or a member of the Project Collection Administrators group to [add a project](#).

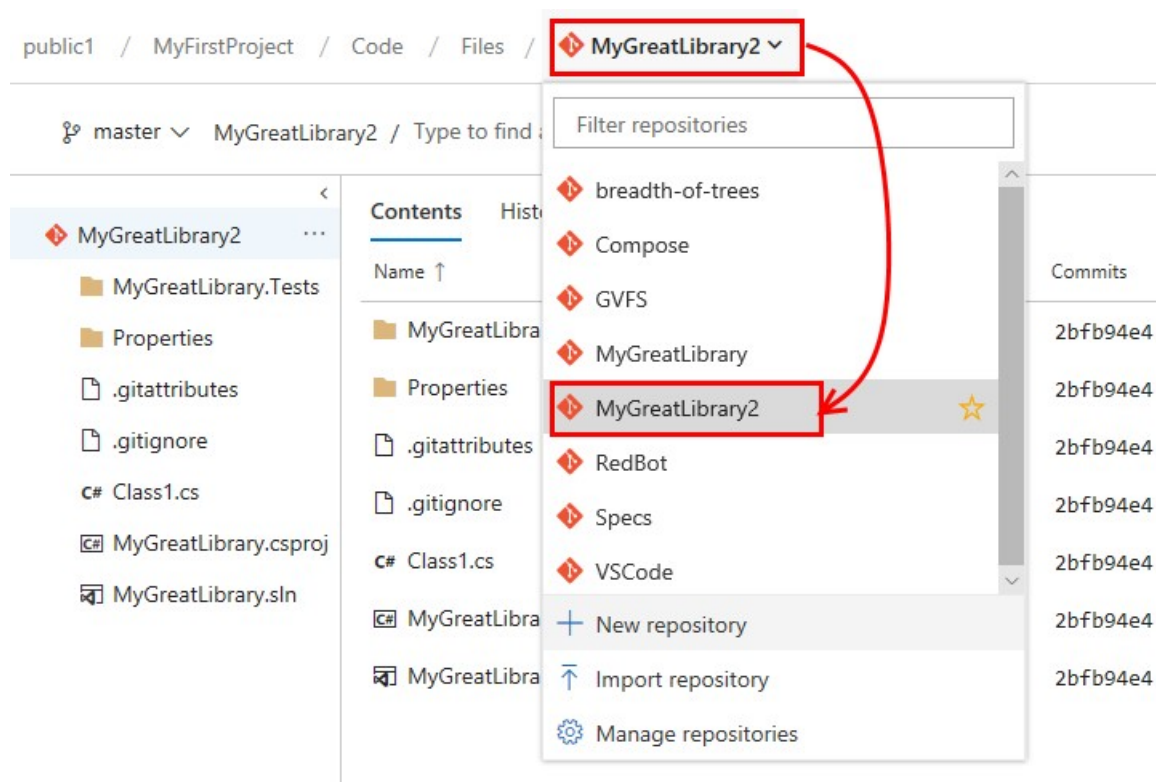

View and open a repository

1. Choose **Repos**>**Files**.

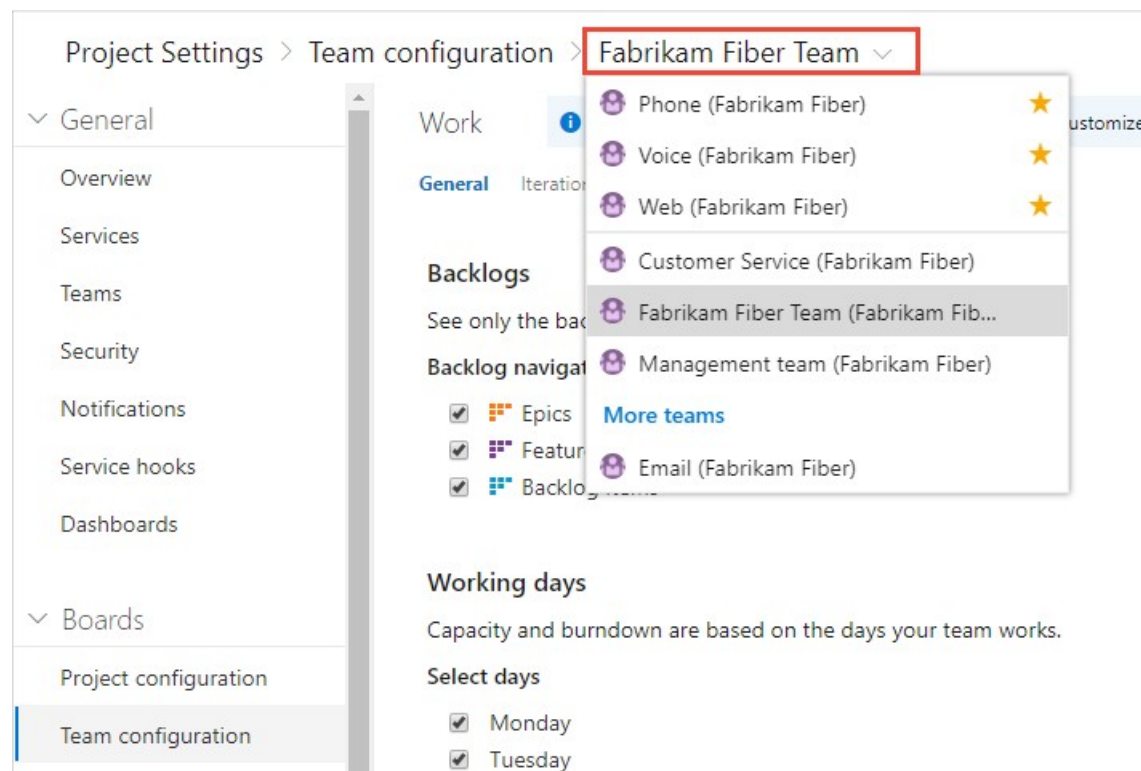

2. Select the repository of interest from the repository selector.

Switch to a different team

From a user page, one under—**Boards**, **Repos**, **Pipelines**, or **Test Plans**—you can't switch to a different team, you can [only select team artifacts](#).

From a **Project Settings > Work > Team configuration** page, you select a team from the team selector breadcrumb.
