## Product backlog controls

Azure Boards | Azure DevOps Server 2019 | TFS 2018 | TFS 2017 | TFS 2015 | TFS 2013

Once you've defined your product backlog, you can use the following controls to change or filter the view.

Control	Function
Backlog	Switch to backlog view
Board	Switch to Kanban board view
Forecast	Turn forecasting Off/On
Mapping	Turn mapping Off/On
Parents	Show/Hide parents
In progress items	Show/Hide in progress items
٠	Manage teams and configure team tools
[] / ] [	Enter or exit full screen mode
+/-	Expand or collapse one level of the tree hierarchy
	Email a copy of your backlog
$\nabla$	Turn filtering On/Off

## (i) Importante

If you set the In progress control to Hide, then items that are in the Active, Committed, or Resolved states or in the In Progress category state won't appear in the backlog.

Even if you have show parents turned on, the Create query and mail  $\square$  controls will only list items at the currently selected level.
