Azure DevOps Services | Azure DevOps Server 2019 | TFS 2018 | TFS 2017 | TFS 2015

Use the Markdown widget to support your team and stakeholders by adding information such as:

- Team goals
- Provide links to team backlogs or boards, metrics, or other items located in a network share such as a OneNote, SharePoint site or wiki pages
- Important dates or target deadlines

Here's an example:

## Prerequisites

- You must be a member of a project. If you don't have a project yet, create one.
- If you haven't been added as a project member, get added now.
- Anyone with access to a project, including stakeholders, can view dashboards.
- To add, edit, or manage a team dashboard, you must have **Basic** access or greater and be a team admin, a project admin, or have dashboard permissions. In general, you need to be a team member for the currently selected team to edit dashboards.

Connect to your project

To add the markdown widget to a dashboard, you connect to your project using a supported web browser.

Open a web browser, connect to your project, and choose **Overview>Dashboards**.
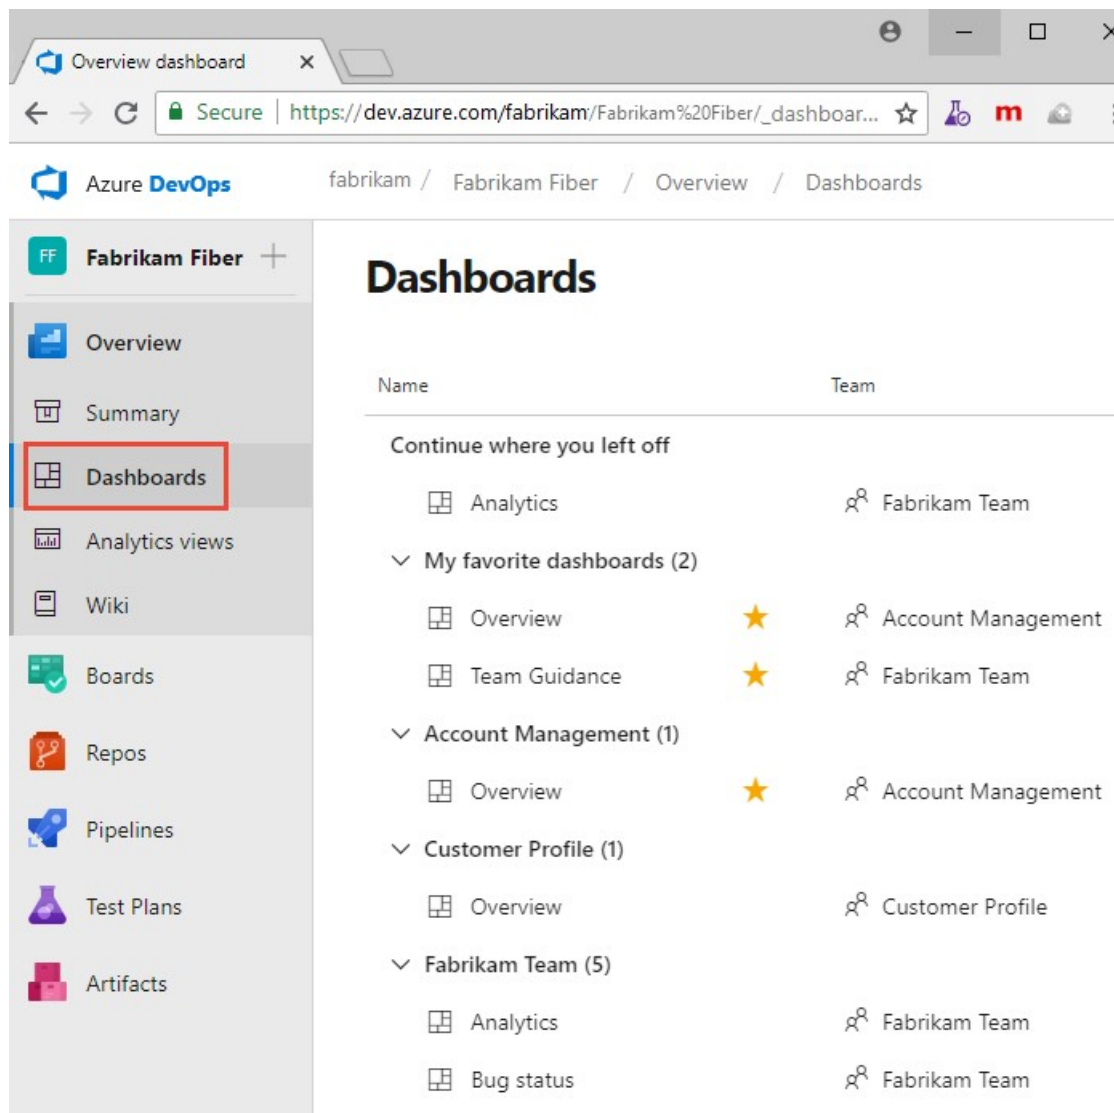

If you need to switch to a different project, choose the 🔵 Azure DevOps logo to browse all projects.

Add the markdown widget

If you need to add a dashboard, see Add, rename, and delete dashboards.

To add the markdown widget to the dashboard, choose ✏️ **Edit**. The widget catalog will automatically open.
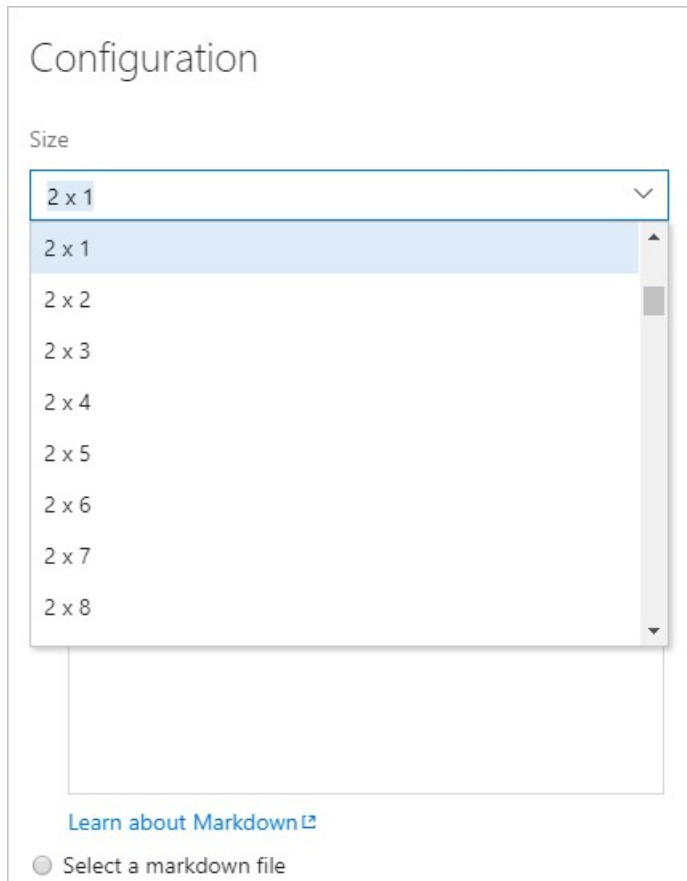

1. Add or drag the Markdown widget onto the dashboard where you want it located.
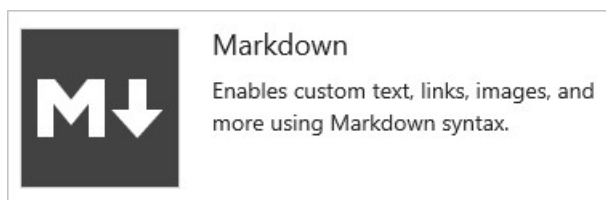

2. Choose **Done Editing** to exit dashboard editing. This will dismiss the widget catalog. You can then configure the markdown widget as needed.

3. Choose the ⚙️ gear icon to open the configuration dialog for the widget.

   To edit a markdown widget, you may need to be a team admin, a member of the Project Administrators group, or be granted permissions. To learn more, see Set dashboard permissions.

4. Adjust the widget size as needed to fit the contents of the markdown you'll enter. The largest size is 10 tiles wide by 10 tiles tall. You can always adjust this later.

5. Enter the text and markdown syntax into the configuration the configuration dialog. For supported syntax, see Syntax guidance for Markdown files, widgets, wikis, and pull request comments.

Here we show some simple text with a bulleted list of four links

Configuration

Size

```
2 x 2                                                    ∨
```

◉ Custom markdown

```
##Fabrikam Fiber Voice team

The Voice team supports all voice services,
including VOIP, voicemail, instant messaging,
and the frameworks, security, authentication,
and file services associated with these
services.

♡ Dica

To link to a wiki page,use the following syntax:

```
/ProjectName/_wiki/wikis/WikiRepositoryName?pagePath=/FileName
```

To link to a repository file, page, or image within the project, rich-click the file and use the full URL.

This renders the following widget:

Fabrikam Fiber Voice team

The Voice team supports all voice services, including VOIP, voicemail, instant messaging. and the frameworks, security, authentication, and file services associated with these services.

- Voice SDK ↗
- Voice Feature backlog ↗
- Voice Customer Council ↗

ⓘ Observação

Links to documents on file shares using `file://` are not supported. This restriction has been implemented for security purposes.

6. Optionally, you can choose to point to a file in your repository.

Configuration

Size

2 x 2
